

Lovoson — High Value Discovery & Conversion Flow SOP

This SOP is designed to guide Lovoson discovery and sales calls toward high-value positioning. The objective is to diagnose operational friction, uncover revenue leakage, and position Lovoson as a systems and growth partner — not just a website provider.

1. Goal of the Call

Do NOT sell:

- websites
- AI tools
- random integrations

Sell:

Operational improvement, conversion optimization, smoother systems, and revenue growth.

2. Opening Frame

“Appreciate you hopping on. Before I show anything, I want to understand where you’re at currently, what’s working, what’s frustrating, and where the biggest opportunities are.”

3. Diagnose the Real Problem

Most businesses think they need:

- a new website
- ads
- branding
- SEO

Usually the deeper issue is:

- weak conversion flow
 - poor follow-up systems
 - operational friction
 - lead leakage
-

4. Discovery Questions

Business State

- What’s currently bringing in most of your business?
- What’s working best right now?
- Where do you feel things break down?

Conversion & Lead Flow

- How are people finding you?
- What happens after someone lands on your site?
- Do you feel like you're converting as much traffic as you should?
- How many leads are slipping through the cracks?

Operations

- What still feels manual or inefficient?
 - What takes unnecessary time?
 - What do customers ask before buying?
-

5. Reframe the Problem

Instead of:

"You need a better website."

Say:

"This sounds more like a conversion and systems issue than a traffic issue."

Or:

"There's already attention there — the issue is friction between attention and conversion."

6. Position the Conversion Engine

"What I build is less of a traditional website and more of a conversion engine."

"The goal is to create a system that captures attention, builds trust quickly, guides users properly, and removes friction from taking action."

7. Explain Value

Avoid feature dumping.

Connect every tool to business impact:

"Most businesses lose customers because nobody responds fast enough or guides them properly."

"The system is designed to engage visitors instantly and move them toward action."

8. Demo Structure

While showing the site:

- explain trust-building
- explain conversion paths
- explain friction reduction

- explain operational efficiency

Example language:

“This section is designed to answer objections early.”

“This reduces drop-off.”

“This guides users toward action faster.”

9. Future Vision

“The long-term goal is building a system where the business runs smoother, converts higher, and requires less manual chasing.”

10. Pricing Positioning

“The setup is \$2,000 to build and implement the full system properly.”

“Then ongoing optimization and management is \$750/month so the system keeps improving over time.”

11. Objection Handling

Need to think about it:

“Totally understandable. The main question is whether continuing to lose opportunities in the meantime is worth waiting.”

Too expensive:

“The goal is building a revenue-producing asset, not just another expense.”

We already have a website:

“The question is whether it’s functioning like a conversion system or simply existing online.”

12. Closing

“Honestly, I think this could clean up a lot of the friction you described.”

“Next step would just be getting implementation started and I’ll handle building everything out properly from there.”

13. Energy & Positioning

Your energy should feel:

- calm
- analytical

- strategic
- observant

NOT:

- desperate
 - pushy
 - overly technical
 - hype-driven
-
